Spiral Chaos Cube

Welcome to **RoboRosewater Masters: Spiral Chaos**, where the color pie is made up and the archetypes don't matter. This may be the most chaotic draft you'll ever experience, outside of an UN-set, so we suggest having a judge on hand when you play. We've also included a "*Judge & Player Tips*" sheet to explain some of the stranger rulings that may come up.

Our design philosophy for this cube was to be less "random" than the first RRW cube, while also approaching the power level of a Modern Masters set. We chose all-stars from across the AI's creation history, including cards that the team liked and cards that were popular with the viewers on Twitter. Every single card is legal, and almost all of them are playable.

All card text is completely unedited from the original AI output, though some were primed with a name or cost and the model generated the rest. The only human touches were word capitalization, art, frames, some flavor text, and occasional formatting to make them a little more readable.

This cube is best drafted with 6 to 8 players. If you're playing with 6 players the first time you draft it, only use the packs marked with "6+ players."

Draft tips/rules:
● For deckbuilding, you can use snow lands and wastes.
● Color pie is dead (long live goodstuff).
● Rarity means nothing and is assigned arbitrarily by the AI.
● Read the whole card. Possibly twice.
● If you need to roll a die with a non-standard number of sides, we recommend rolling digitally.
● Sideboard is allowed.

Fun facts about RoboRosewater Masters and this cube:
● Spiral Chaos started production on August 19, 2021.
● The set symbol was AI generated.
● Less than a third of the cube uses "real" art. The rest of it is AI generated! Check the artist credit to see who or what made each illustration.
● There are some LRR-related easter eggs within the cards, created by "priming" the AI with a person's name. Everything else on the card is AI generated.
● One card is *entirely* AI generated, including the frame. You'll know it when you see it!

- There are several styles of flavor text used. Some of it is AI generated, some of it is not. It should be obvious which is which.
